## Abstract of JP 2002112142 (A)

**PROBLEM TO BE SOLVED:** To provide a program guide device and a program guide method that can provide a specific EPG display menu to a user, and visually and simply conduct setting and revision of a program view reservation and a video recording reservation. **SOLUTION:** The program guide device registers a program which is desired and favored by the user among programs broadcast by broadcast waves. Furthermore, the program guide device reserves a program to be received, such as a program desired of viewing by the user and a program desired of recording by the user. Then a program cell of the registered program, and a program cell of the reserved program are displayed at positions corresponding to respective broadcast time zones along a time base, in the same two-dimensional program guide menu.
